Kun Pang (Hendrix)

Ph.D. Student, Electrical & Computer Engineering · University of Virginia
hendrix@virginia.edu · hendrixhili.github.io · ORCID: 0009-0000-3722-6597

Education

University of Virginia — Ph.D. in Electrical & Computer Engineering — Charlottesville, VA, USA
Advisor: Prof. Steven Bowers · Research focus: RFIC design — Aug 2026 – Present

Sun Yat-sen University — B.Eng. in Information Engineering (Elite Class) — Guangzhou, China
GPA: 3.7/4.0 · TOEFL: 104 — 2022 – 2026
Selected coursework (4.0/4.0): Electromagnetic Fields and Waves, Digital Signal Processing, Communication Theory, Radar, Automatic Control Theory

Research Experience

K-Band Reconfigurable Intelligent Surface (RIS) for Millimeter-Wave Systems — Dec 2024 – Dec 2025
Prof. Shaoqiu Xiao, Sun Yat-sen University

- Designed a multilayer K-band RIS unit cell (20–26 GHz) featuring two rotationally symmetric hollow I-shaped resonant layers on RO3003 substrate, optimized via HFSS with Floquet-port simulation; unit size 4×4 mm (≈0.30λ at 22 GHz)
- Achieved ∼360° phase tuning range with ∼120° step per coding state, reflection loss <1.6 dB for four primary states, and excellent phase linearity ($R^2 = 0.9991$, RMSE = 0.515°) within the 22–23 GHz operating band
- First-author paper published at EuCAP 2026, Dublin (see Publications)

Microstrip Patch Antenna Array Design — Mar 2024 – Dec 2024
Prof. Shaoqiu Xiao, Sun Yat-sen University

- Designed and fabricated a 4-element patch array at 5.8 GHz (isolation < -20 dB); characterized prototype via VNA measurements and anechoic chamber radiation testing

Engineering Projects

Multilayer Dual Circularly Polarized Satellite Antenna (13–14.5 GHz) — Oct 2025 – Mar 2026
Prof. Shaoqiu Xiao, Sun Yat-sen University

- Designed a Ku-band dual-CP multilayer satellite antenna with isolation-enhanced structure; performed full-cycle HFSS optimization, simulation, and prototype testing

UAV Communication Link Modelling — Dec 2025
Prof. Xiang Chen, Sun Yat-sen University

- Built a full end-to-end link simulator in MATLAB (QPSK, Turbo coding at rates 1/3 and 2/3, CRC-16, pilot-based equalization) to validate a proposed UAV frame structure
- Modelled a 3-path multipath fading channel with delay spread up to 400 ns and max Doppler 737 Hz; confirmed frame integrity via BER/BLER statistics

BPSK Digital Voice Transmission System — May 2025
Prof. Xiang Chen · Lingte Cup National SDR & Communications Design Competition

- Built a real-time end-to-end digital voice link using PlutoSDR and GNU Radio: channel coding, BPSK modulation, matched filtering, and equalization; BER $< 10^{-6}$

Satellite Communication Terminal Support — Oct 2025
Prof. Xiang Chen, Industry Collaboration
On-site satellite modem link setup and RF testing; one of the few undergraduates working alongside graduate and doctoral researchers in an industry field environment.

Awards & Honors

- First Prize, Lingte Cup National SDR & Communications Design Competition — 2025
- Outstanding Student Leader Award, Sun Yat-sen University — 2026
- Excellent Student Scholarship, Sun Yat-sen University — 2023, 2025

Technical Skills & Languages

- **RF & EM Simulation:** HFSS, ADS · **RF Lab & Measurement:** VNA, Anechoic chamber
- **SDR & Communications:** GNU Radio, PlutoSDR, BPSK/QPSK/QAM, channel coding
- **Programming:** MATLAB/Simulink, Python, C++, Git
- **Languages:** English – Proficient · Chinese (Mandarin) – Native
